Experiment 2:

Candidate-Elimination Algorithm

Code:

```
import pandas as pd
df = pd.read_csv("training.csv")
S = ["0"] * (len(df.columns) - 1)
G = ["?"] * (len(df.columns) - 1)
for row in df.values:
    x = row[:-1].tolist()
    y = row[-1]
    if y == "Yes":
        for i in range(len(S)):
            if S[i] == "0":
                S[i] = x[i]
            elif S[i] != x[i]:
                S[i] = "?"
    else:
        for i in range(len(S)):
            if S[i] != "?" and S[i] != x[i]:
                G[i] = S[i]
print("Specific Hypothesis:")
print(S)
print("General Hypothesis:")
print(G)
```

Output:

```
>>> ===== RESTART: C:\Users\saiha\Downloads\lab.py =====
Specific Hypothesis:
['Sunny', 'Warm', '?', 'Strong', '?', 'Same']
General Hypothesis:
['Sunny', 'Warm', '?', 'Strong', '?', 'Same']
>>>
```
